Opportunities	customer awareness.	Provide simple eligibility	Improve application usability.	Deliver accurate Machine Learning predictions.	Provide transparent prediction explanations.	Offer personalized recommendations for improving eligibility.

Journey Summary

The Machine Learning—Based Credit Card Approval Prediction System simplifies the complete customer journey by reducing manual effort, improving prediction speed, enhancing transparency, and providing intelligent decision support. The promised solution enables applicants to understand their eligibility quickly while assisting financial institutions with efficient and consistent credit approval decisions.

Conclusion

The Customer Journey Map demonstrates every interaction between the applicant and the Machine Learning—Based Credit Card Approval Prediction System from initial awareness to the final prediction outcome. Understanding customer behaviour, expectations, emotions, and pain points enables the development Of a secure, user-friendly, intelligent, and efficient credit card approval platform.
